Engineered Cements

Concrete Restoration Products

Whether it's for concrete repair and resurfacing, substrate preparation, flooring installation or for setting natural stone, ceramic tile and other flooring materials, ARDEX brings solid solutions to the most complex installation problems.

ARDEX CD is specially formulated to resurface old, spalled or worn concrete surfaces such as driveways, sidewalks, patios or steps. ARDEX CD is a cost-effective alternative to complete concrete replacement.

This high quality Portland cement-based product mixes with water and readily bonds to all concrete surfaces, providing a durable, new wear surface suitable for foot, rubber-tire, and automobile traffic.

ARDEX CP is a trowel-grade cementitious topping for filling and repairing areas of outdoor and indoor concrete above or below grade.

Ideal for filling or re-sloping existing concrete, ARDEX CP can be used to fill surface defects such as spalls, gouges and dormant cracks, to re-form concrete steps and curbs, and to resurface vertical concrete. ARDEX CP can be used for a wide variety of applications, including sidewalks, patios, walkways, driveways, garage floors, pool decks – anywhere old concrete needs a new surface.

ARDEX Overhead Vertical Patch (OVP) is a trowelable Portland cement-based finishing compound used to fill and smooth interior and exterior overhead and vertical concrete surface defects such as spalls, gouges, cracks, dents, chips, bug holes, honeycombs – any type, size or shape of surface defect that needs to be filled and smoothed before coating.

For use on pre-cast, poured-in-place concrete panels, tiltup walls, or any other vertical or overhead concrete or masonry surfaces prior to sealing or painting.

ARDEX Tilt Wall Patch (TWP) is a surface treatment for filling and smoothing interior and exterior vertical concrete or masonry surfaces prior to sealing or painting.

ARDEX TWP is a trowelable Portland cement-based finishing compound. When mixed with water, the result is a creamy, smooth, consistency for easy application. Tougher and more durable than traditional gypsum and latex patches, ARDEX TWP dries internally, permitting the finish coat of paint or sealer to be applied as soon as the surface is hard. Hardens quickly and dries fast without shrinking, cracking, or spalling.

ARDEX SD-T is a Self-Drying, Self-Leveling Concrete Topping which allows you the freedom to create the right flooring for that one-of-a-kind look...from natural cement gray to brilliant integral colors, luxurious inlays and creative topical stain designs

ARDEX SD-T installs quickly and easily indoors over concrete to provide a hard, smooth, flat concrete surface. SD-T provides the right mix of toughness, low maintenance and high durability.
